

## BioConnect 4.7 Release Notes

### Insights

New cloud subscription feature that enables administrators to monitor and assess the health of the system. Insights is a web-based dashboard that provides customers with notifications and data analytics that will enable them to continuously improve the performance of the system. Insights enables security teams to address the top three issues they encounter

- Which users need to be re-enrolled/re-trained?
- Which devices are causing the most issues?
- Which administrators need to be re-trained on how to capture fingerprints?

### Genetec Deep Embed

- Customers can now perform face and finger enrollments directly from the Genetec UI
- Available on Genetec 5.7 and above
- Customer is required to have the following key enabled in the license: GSC-SDK-ENTERTECH-BioConnect

### BioLite N2 device integration

- New device available in BioConnect
- Multiclass card reader
- Three-factor authentication capability using PIN pad

### BioMini Plus 2 device integration

- New enrollment device for improved template capture and matching reliability
- BioMini and BioMini Plus 2 will be supported simultaneously

### Login Workflow

- No-longer need to select a location on login
- Users will be able to see all the locations they have access to

### Installation Videos in Setup Assistant

- Setup Assistant now includes a link that will direct the customer to a web-page with all our installation videos

### CCURE Deep-Embed update

- CCURE Deep-Embed now supports BioMini, BioMini Plus 2 and FaceStation 2 enrollment

### H10302 Card Support

- HID H10302 now supported as a standard card format on Gen 2 devices and CabinetShield

### Rabbit MQ TLS Encryption

- Rabbit MQ communication now secured using TLS 1.2
